

Moveable Hoist

Powder

Mixer/

Steam Supply

PETFOOD PROCESSING APPLICATIONS

- 1 Ground Meat/By-product Heating and Mixing
- 2 Raw Materials Heating and Mixing (Cereals/Grains, Vitamins/Minerals)
- 3 Dye/Color Injection System
- 4) Extruder
- 5 In-line Flavor Injection System

Superheated Water

Extruder

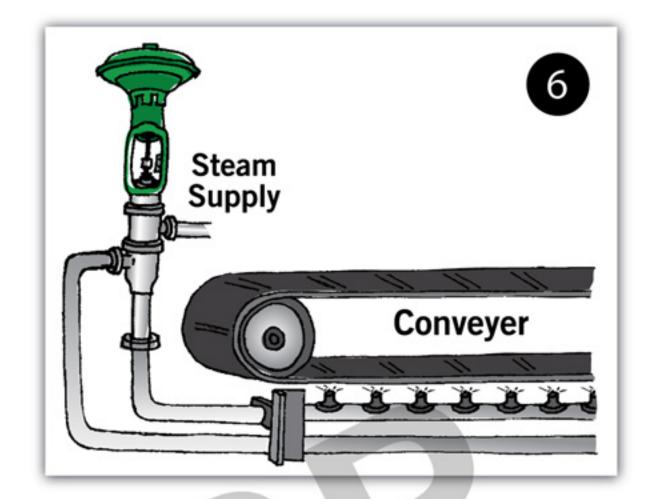

and Pre-conditioner

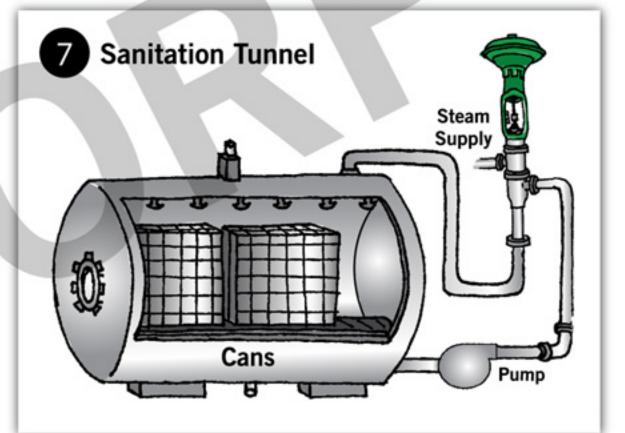

- 6 Conveyer Cleaning/Spray Bar
- 7 Sanitation/Canning Process
- B) Digester/Waste Treatment
- 9 Central Hot Water System

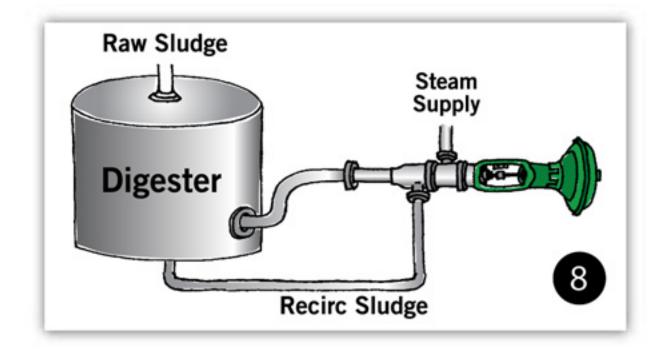

Steam Supply

Spray System

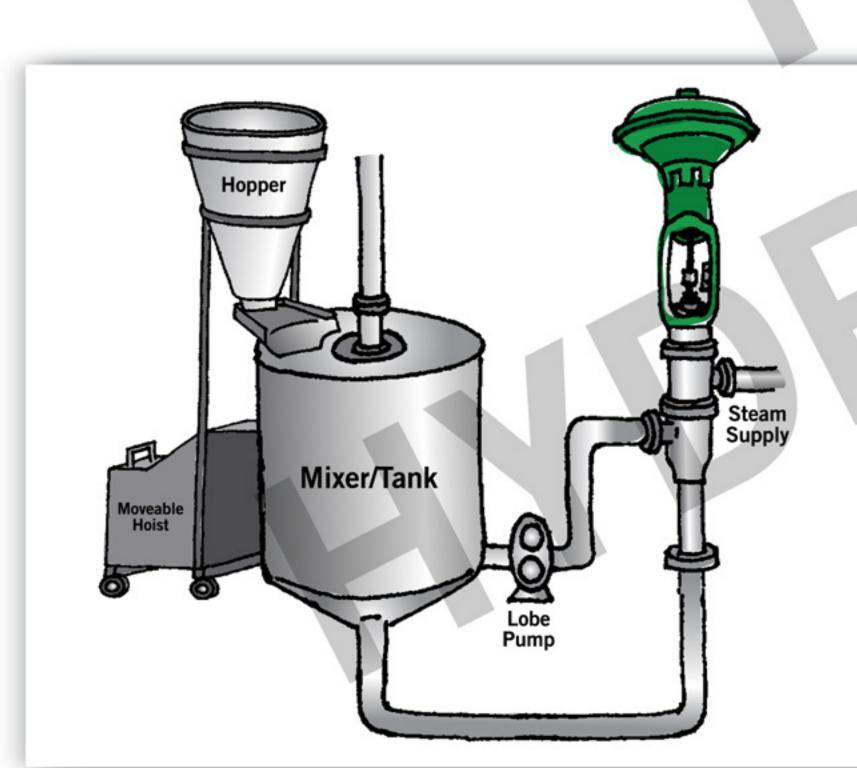

00-

→ To Oven/Dryer and Packaging/Canning

Pre-Process Flavoring Plant:

1) LAD (Liquid Animal Digest)

Slurry is heated to 200°F and held for 90 seconds with Enzymes

2) Dryer Slurry

Pump

Heated to 170°F for 90 seconds and then sent to the homogenizer

3) FINES Process

Heated waste particulate which is screened and put back into the mix slurry and heated to 200°F for 90 seconds with Enzymes.

These are all time and temperature applications which eventually turns this into a USDA approved powder used in the coloring and flavoring of dry food at sister plants.
